We will have to run a change like that by H&S if it is more than ask additional questions at their work location.

As the Community Liaisons are out in the field, can they report back on what they are seeing with regard to Debris location, volume and whether or not the debris is being collected? They should not drive around looking for Debris, but in the course of their routine activities just record their observations. TCEQ is also sending folks out into the field from their regional offices to do the same thing. While most of the local folks are getting their own contracts and some might be seeking federal assistance, the State of Texas is planning to target some areas for the deployment of state assets via TxDOT.

There are four ways they plan to gather this information:

- FEMA Debris Task Force calls where the counties will participate
- TCEQ Field Teams
- EPA Community Liaisons
- Incident Command Branch Observations
- SOC-TDEM County Damage Assessments
- Regional Director Awareness

Thanks,
Ronnie
